

Education ICT Partnerships

For schools looking to expand into new curriculum areas or to extend and enhance existing areas, a strong partner can be key to strengthening the school. By partnering with an IT company that is already integrated into the education sector a school's entry into new curriculum areas can be made easier and more realistic to achieve.

Develop education ICT capital

Education ICT capital are technologies, pedagogy, rituals, habits and norms that all come about because of the application of education technologies in schools. Education ICT capital fosters, encourages and enriches creativity, collaboration and learning. In nearly all cases a school's education ICT capital is enriched when they work in partnership with a diverse range of businesses and organisations.

Integrate Education and Innovation

New waves of technology always bring about change. A school's knowledge when applied to a new curriculum paradigm will always lead to innovation. Innovation will bring about change and when change is well managed it will lead to educational enhancement.

Promote Partnerships

Every partner brings something valuable to the relationship. Partners have diverse perspectives on the challenge at hand. Don't be put off by partnerships made up of three or more companies or organisations. Partnerships thrive where there is trust. Are your education and business philosophies similar? Do you all want the same things out of your venture?

Reward Collaboration

Partnerships thrive where all parties benefit from the relationship. By developing a long-term investment strategy for ICT in your school you will secure a trusted relationship with your education ICT partners. Private companies benefit by having healthier balance sheets and your school benefits by realising improved educational outcomes.
